UNSCEAR’s global medical exposure surveys – a practical demonstration of the new online data collection platform

Ferid Shannoun, PhD
UNSCEAR secretariat, Austria
UNSCEAR's mandate

- Established by UN General Assembly (GA) resolution in 1955
- Assess levels, effects & risks of ionizing radiation
- Disseminate findings to UN GA, scientific community & public
- Scientists from 27 UN Member States
- Other states & organizations provide relevant data
- Holds annual sessions in Vienna
- UNEP arranges secretariat and provides support
UNSCEAR's role in radiation protection

**UNSCERAR**
Scientific basis

**IAEA, WHO, ILO, FAO etc.**
- Safety standards
- Protection programmes

implemented by
Member States
To assess:

- global estimates of level of exposure and frequency, with breakdowns by medical procedure, age, sex, health care level, and country;
- trends in practice (including those relatively fast-changing);
- supporting related information on equipment and staffing levels.
Medical exposures categories

– Diagnostic radiology
  • Plain radiography, fluoroscopy, CT and DEXA
  • Image guided interventional procedures
– Nuclear medicine
  • Gamma camera, PET/CT and NM treatments
– Radiation therapy
  • External beam therapy and brachytherapy
Analytical model to extrapolate to a global level of medical radiological exposure

- Estimating the frequency of medical radiation usage on a worldwide basis
- Number of physicians per population correlates with the number of medical radiological devices and procedures
- Grouping of countries by health care systems / levels

UNSCEAR’s model to global estimate medical exposures

HCL I : > 1000 physicians / 1 Mil. population
HCL II : 334 and 1000 physicians / 1 Mil. population
HCL III : 100 and 333 physicians / 1 Mil. population
HCL IV : < 100 physicians / 1 Mil. population
• **E (Effective dose)** is used for expressing stochastic risk to radiation workers and to whole population
  – Given by: \( E = \sum_T w_T H_T \)
    where equivalent dose to tissue or organ, \( H_T \), is weighted by dimensionless tissue weighting factor \( w_T \).

• Effective dose concept applies only to dose levels in radiology and nuclear medicine and is **NOT** appropriate to assess dose levels in radiation therapy.
**S (Collective effective dose)** is summation, over all types of examinations, of mean effective dose ($E_e$) for specific examination type multiplied by number of examinations ($n_e$)

- Given by: $S = \sum E_e n_e$
- $n_e$ = number of annual frequencies (expressed as number of examinations per 1,000 population)

"It is possible...to use effective dose and even collective dose for medical diagnostic exposure as long as this is done only for comparative purposes and for the same or similar patient populations, and it would require additional considerations or significant corrections if we try to use them to compare with other populations.” [UNSCEAR 2000]
Diagnostic radiology: Trend in annual frequency by HCL

UNSCEAR SURVEY

Diagnostic radiology: Trend in per caput effective dose

PER CAPUT EFFECTIVE DOSE (mSv)

UNSCERAR SURVEY

1988: 0.35
1993: 0.3
2000: 0.4
2008: 0.62
Diagnostic radiology:
Annual average per caput effective dose

Radiotherapy:
Annual number of treatments per HCL

• Medical exposure remains by far largest artificial source of exposure and continues to grow significantly.

• Distribution of medical exposures is uneven among counties and regions:
  24% of world population receive:
  – 65% of all diagnostic examinations;
  – 90% of all nuclear medicine procedures;
  – 70% of total radiation therapy treatments.

• The information are based mainly on HCL I countries.

• UNSCEAR seeks to improve the data collection process and the global assessment methodology.
NCP download templates (1) and provide data (2). Data are imported into the UNSCEAR Medical Exposure Database (3). [Selected information are accessible on the portal (4)]. Exports (5) can be created at any time and used for reporting (6).
Data submission process

- **Data collection via excel templates; available on platform**
  - Radiology including Interventional Procedures;
  - Nuclear Medicine;
  - Radiotherapy.

- **Data requested are questionnaire sheets:**
  - General Information
  - Staffing and equipment
  - Frequency and age/sex distribution
  - Dosimetry

### Contact information

**DR. PIRUNTHAVANY**

---

**GENERAL NOTES FOR COMPLETION OF THE QUESTIONNAIRES**

The Global Survey of Medical Radiation Usage and Exposure consists of three questionnaires:

1. **Radiological Diagnostic** requesting information on examination frequencies and on estimated average patient dose per examination including variations of the dose quantities (standard deviations). Estimates of effective dose - if available - are demanded;

2. **Nuclear Medicine** requesting information on mean activities of radiopharmaceutical administered to patients including variations (standard deviation) and information on the major types of procedures of diagnostic examinations or therapeutic treatments. Estimates of effective dose - if available - are also demanded; and

3. **Radiotherapy** requesting information on numbers of treatments and typical dose values.

Data submission process

- **Data submission via online platform; upload function**
  - Note Verbale to Missions in Vienna invited MS to nominate a National Contact Person (NCP) for UNSCEAR; ~40
  - NCPs are requested to submit data officially via platform;
  - Technical experts are allowed to register to the platform;
  - NCPs and experts can access submission on country page;
  - Additional material is valued as supporting information;
  - All contributions will be acknowledged at the relevant UNSCEAR Reports to the General Assembly; and

- Countries don’t providing information will be extrapolated.
Preguntas?
UNSCAR Global Survey

On Medical Radiation Usage and Exposure from 2006 onwards

The United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCAR), established by the United Nations General Assembly in 1955 to assess and report levels and effects of all sources of ionizing radiation conducts regular Global Surveys of Medical Radiation Usage and Exposure.

This online platform is to support governments and international organizations to provide national and regional data on the use of radiation in medical diagnosis and treatment for the UNSCAR Global Survey on Medical Radiation Usage and Exposure from 2006 onwards.

National Contact Persons (NCPs) are invited to register here to be able to access the protected area before they can download the questionnaires for official data submission. Additional national experts can be registered to support the NCPs. All contributions will be acknowledged by UNSCAR in the relevant report to the UN General Assembly.

UNSCAR is grateful to the World Health Organization for establishing arrangements for cooperation which resulted in developing a common medical questionnaire for this survey and to the European Commission for permitting the use of the outcomes of the DoseDataMed II project.

Please read further instructions, background information and help if you are interested in using this platform.
Registration of new users

Please fill in the information requested below to register on the UNSCEAR online survey platform. UNSCEAR needs to validate your request before you will be able to use the system. The validation process could take some time.

Make sure you supply a valid e-mail address as it will be used for providing your password and as your login identification.

E-Mail

Name (Firstname Lastname)

Phone number (incl. International Dialing Prefix)

Organization

City
Countries are requested to nominate a National Contact Person (NCP) via official channels to the UNSCEAR secretariat either by mail or fax (+43 1 260605902) to coordinate the national submission.

Please select from the list below for which discipline(s) you are contributing to the data collection process and if you are the National Contact Person. Multiple-choice is possible.

- National Contact Person
- Diagnostic Radiology (RD)
- Nuclear Medicine (NM)
- Radiotherapy (RT)

Please fill all letters into the right hand box below in order to prevent SPAM.
Update your account profile

UNSCEAR Global Survey

On Medical Radiation Usage and Exposure from 2005 onwards

The United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR), established by the United Nations General Assembly in 1955 to assess and report levels and effects of all sources of ionizing radiation conducts regular Global Surveys of Medical Radiation Usage and Exposure.

This internet platform is to support governments and international organizations to provide national and regional data on the use of radiation in medical diagnosis and treatment for the UNSCEAR Global Survey on Medical Radiation Usage and Exposure from 2005 onwards.

National Contact Persons (NCPs) are invited to register here to be able to access the protected area before they can download the questionnaires for official data submission. Additional national experts can be registered to support the NCPs. All contributions will be acknowledged by UNSCEAR in the relevant report to the UN General Assembly.

UNSCEAR is grateful to the World Health Organization for establishing arrangements for cooperation which resulted in developing a common medical questionnaire for this survey and to the European Commission for permitting the use of the outcomes of the DoseDataMed II project.

Please read further instructions, background information and help if you are interested in using this platform.
Malaysia (Asia Pacific; ISO Number 458)

Find below all files related to your individual data collection process. Please download your country specific templates. After completing the data collection, please upload the file(s). You can follow the data processing steps in the dedicated sections below. Please use the comment area at the end of the page for questions and messages from/to the experts.

Download Data Templates

Please download the following templates and fill them with the data you have available.

- malaysia_unscear_survey_nuclearmedicine_v1_0.xls
- malaysia_unscear_survey_radiology_v1_0.xls
- malaysia_unscear_survey_radiotherapy_v1_0.xls

Upload Collected Data Files

Please upload the file(s) using the media files upload function.

The uploaded data will be processed by our data collection system and reviewed by a panel of scientific experts. Find below the files in the different processing steps.

Background

The UNSCEAR online data collection platform is currently being tested in some countries and will be available to all UN Member States very soon.

UNSCEAR systematically collects information obtained through population-based surveys on the use of radiation in medicine and the associated exposure. National Regularity Authorities and more recently Ministries of Health, due to the cooperation with the World Health Organization, are allowed to submit data officially to the UNSCEAR secretariat.

These surveys are used to identify trends in radiation exposure and thus serve as an early warning sign of potential safety issues that might require special attention. They can also be used to identify gaps in treatment capabilities and possible unwarranted dose variations for the same radiological procedure.

UNSCEAR has established this online data collection platform to enable the direct download/upload of the survey questionnaires (country specific templates). National contact persons (NCP) are invited to register here to be able to access the protected area before they can make an official submission.

UNSCEAR produces detailed reports for the United Nations General Assembly which are highly regarded as authoritative reviews examining radiation exposure from natural sources and artificial sources. The UNSCEAR secretariat plans to publish first results of the current survey in the 2015 Report.

All UNSCEAR publications are available free online and all contributors will be acknowledged.
Instructions

This platform manages the official submissions to UNSCEAR's Global Survey of Medical Radiation Usage and Exposure.

Before using this platform, please carefully read the instructions below describing the data collection process!

1. Registration

To be able to access the protected area, it is necessary to register on this platform first. Please click the 'Register' button at the top right of the screen. Registration is open to all those responsible for providing data to UNSCEAR's Global Survey of Medical Radiation Usage and Exposure. You are asked to register using a valid email address and details about your institution and profession. Also, you have to indicate the country for which you are providing data. Official submission of data is only allowed by a National Contact Person (NCP), who needs to be nominated to UNSCEAR via official channels. Furthermore, it is possible to register other persons (experts) to support their NCP. They don't need to be nominated but should provide their contact details and indicate their specialization.

If you have any questions in this regard, please contact us.

Once you have registered, you will receive a confirmation email.

2. User validation

The UNSCEAR secretariat will validate user information before providing access to the platform! This validation could take a few days as registration details may be checked by phone or email. The validation process includes assignment to the country and region that will be used to generate your country specific data templates.

Once the account is validated, you will receive an email with your personalized password.
IRPA Workshops

UNSCEAR - in cooperation with IRPA and WHO - plans to organize hands-on workshops at the following IRPA regional conferences:

- Asian and Oceanic Congress on Radiation Protection in Kuala Lumpur, Malaysia (12-16 May 2014) [Link]
- European IRPA Congress in Geneva, Switzerland (23-27 June 2014) [Link]
- African Regional IRPA Congress in Rabat, Morocco (13-17 September 2014) [Link]
- Latin American IRPA Conference in Buenos Aires, Argentina (12-17 April 2015)

The new UNSCEAR data collection platform aims to increase the numbers of countries providing data by facilitating the collection process and providing a long term archive.

Due to the expected increased participation (HCL II-IV) and an a new estimation model taking health economic factors into account an improved estimation of the overall global medical exposure is expected.

The collaboration with International Organizations (e.g. IAEA, WHO, FORO) and professional societies (e.g. IRPA, IOMP, ISR) is essential to profit from existing experiences and to avoid duplication of efforts.
