- Universal health coverage
- WHO and health data collection
- Radiation-related work at WHO, the Global Initiative on radiation safety in health care settings
- WHO's cooperation with UNSCEAR on data collection on medical exposures
The World Health Organization

- **Objective**: attainment by all peoples of the *highest possible level of health*

- **Function**: act as the UN directing and coordinating authority on *international health work*
The WHO 3-level structure

- Headquarters
  - Geneva

- 6 Regional Offices

- 147 Country Offices

- IARC, Lyon

194 Member States
Ministries of Health

WHO

3-level structure

PEOPLE

Last but not least, WHO is people. Over 8000 public health experts including doctors, epidemiologists, scientists, managers, administrators and other professionals from all over the world work for WHO in 147 country offices, six regional offices and at the headquarters in Geneva, Switzerland.

World Health Organization
WHO Governing Bodies

The **World Health Assembly (WHA)** is the supreme decision-making body. Representatives of the **Ministries of Health** of the **194 WHO's Member States** meet once a year in Geneva.

The **WHO Executive Board (EB)** meets twice a year to give effect to WHA decisions and facilitate its work. It is composed of **34** representatives designated by Member States elected by the WHA.
WHO's core functions

1. Articulate ethical and evidence-based policy positions

2. Setting norms and standards, and promoting and monitoring their implementation

3. Shaping the research agenda, and stimulating the generation, translation and dissemination of valuable knowledge

4. Providing technical support, catalysing change and developing sustainable institutional capacity

5. Monitoring the health situation and assessing health trends

6. Providing leadership on matters critical to health and engaging in partnerships where joint action is needed
Content

- About WHO: objective, function, structure, governance
- Universal health coverage
- WHO and health data collection
- Radiation-related work at WHO, the Global Initiative on radiation safety in health care settings
- WHO's cooperation with UNSCEAR on data collection on medical exposures
WHO's definition of health

- **Health** is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity (WHO Constitution, 1948)

- Promoting and protecting **health** is essential to human welfare and sustained economic and social development.

- "**Health for All**" would contribute both to a better quality of life and also to global peace and security (Alma-Ata Declaration, International Conference on Primary Health Care, 1978).

- **Health** is a **human right** that people rate as one of their highest priorities in most countries.
Health promotion

- **Health promotion** is the process of enabling people to increase control over, and to improve, their health.

- It includes **individual behavior**, but it moves beyond this focus towards a wide range of **social and environmental interventions** to promote and sustain health (education, housing, energy, food, employment, air quality, water quality & sanitation, chemical safety, radiation safety,…)

- Timely access to **health services** is critical for:
  - promotion, prevention, treatment and rehabilitation
Huge disparities in health expenditure between countries are paralleled by disparities in access to health services.
WHO Member States adopted in 2005 a goal:

- develop their health financing systems so that all people have access to services without suffering financial hardship paying for them.
- this goal was defined as universal health coverage.
Content

- About WHO: objective, function, structure, governance
- Universal health coverage
- WHO and health data collection
- Radiation-related work at WHO, the Global Initiative on radiation safety in health care settings
- WHO's cooperation with UNSCEAR on data collection on medical exposures
The **Global Health Observatory (GHO)** provides data and analyses on global health situation and trends, including core indicators, database views, major publications and links to relevant web pages.

The **GHO** data repository provides access to over 50 datasets on priority health topics, including an extensive list of indicators.

- About WHO: objective, function, structure, governance
- Universal health coverage
- WHO and health data collection
- Radiation-related work at WHO, the Global Initiative on radiation safety in health care settings
- WHO's cooperation with UNSCEAR on data collection on medical exposures
Medical Radiation Exposures

- The largest contributor to the exposure of the population from artificial sources (95%) only exceeded world-wide by natural background as a source of exposure.

- Almost equal to natural background as a source of exposure to the population in US (NCRP Report 160), similar trend in other countries...

**Annually worldwide**

- 3,600 million X-ray exams (> 300 million in children)
- 37 million nuclear medicine procedures
- 7.5 million radiation oncology treatments
Radiation in medicine in the World Health Assembly

The World Health Assembly (WHA) requested WHO to "study the optimum use of ionizing radiation in medicine and the risks to health of excessive or improper use".

(WHA, 1971)
Resolutions of the World Health Assembly

- WHA resolution (12.40) requests "… IAEA-WHO to act in close cooperation with each other and consult each other regularly in regard to matters of common interest…" (Basic Document, 1959)

- WHA resolution (25.57) urge WHO "…to cooperate with IAEA, UNSCEAR and other international organizations in evaluating the world situation as regards the medical use of ionizing radiation and the effects of radiation on populations" (WHA, 1972)

- WHA resolution (60.29) urge WHO MS "to draw up guidelines to ensure the quality, safety and efficacy of medical devices" (WHA, 2007)
WHO Global Initiative on Radiation Safety in Health Care Settings

To support implementation of radiation safety standards (BSS) in medical settings, focusing on Public Health aspects related to the use of radiation in health care.

International partners of the Global Initiative

- The patient's voice
  - PFPS network

- International Organizations
  - IAEA, UNSCEAR, ILO, ICRP, IRPA, EC, FORO, HERCA

- Professional Societies
  - International (ISR, IRQN, ISRRT, IOMP, ISDE, WONCA, WDF/FDI, WFPR, WFUMB (WFNMB));
  - Regional (ESR, ESTRO, EFRS, ESPR, IACR/CIR, ASR, PASR, EFOMP, ASTRO, ALATRO, JATRO, other regional societies)

- National authorities (e.g. ASN, FDA, FANC, FOPH, NRPA, STUK, ..., others)

- WHO Collaborating Centres (e.g. Research Center for Radiation Medicine (Ukraine), Medical Radiological Research Center (Russia), BfS (Germany), IRSN (France), NIRS (Japan), PHE (UK), BARC (India), ARPANSA (Australia), ..., others)
International Conference on RP in Medicine

3–7 December 2012
Bonn, Germany

• Organized by the IAEA, cosponsored by WHO, hosted by the Government of Germany.

• > 500 participants from 77 countries and 16 organizations reviewed advances, challenges and opportunities.

• Main outcome: **Bonn Call for Action** to improve RP in health care in the next decade.
Participants from 77 countries and 16 international organizations attended the Conference, and an important outcome was the identification of responsibilities and a proposal for priorities for stakeholders regarding radiation protection in medicine for the next decade. This specific outcome is the **Bonn Call for Action**. It is a statement that identifies the main actions considered to be essential for the strengthening of radiation protection in medicine. Participants and organizations who attended the Conference expressed the need for a joint statement to be issued by the IAEA and the WHO.
Bonn Call for Action

1. Enhancing implementation of justification of procedures
2. Enhancing implementation of optimization of protection and safety
3. Strengthening manufacturers’ contribution to radiation safety
4. Strengthening RP education and training of health professionals
5. Shaping & promoting a strategic research agenda for RP in medicine
6. Improving data collection on radiation exposures of patients and workers
7. Improving primary prevention of incidents and adverse events
8. Strengthening radiation safety culture in health care
9. Fostering an improved radiation benefit-risk-dialogue
10. Strengthening the implementation of safety requirements (BSS) globally

- About WHO: objective, function, structure, governance
- Universal health coverage
- WHO and health data collection
- Radiation-related work at WHO, the Global Initiative on radiation safety in health care settings
- WHO-'s cooperation with UNSCEAR on data collection on medical exposures
Action 6: Increase availability of global information on medical and occupational exposures in medicine

- Improve collection of dose data and trends on **medical exposures** globally, and especially in low- and middle-income countries, by fostering international cooperation;

- Improve data collection on **occupational exposures in medicine** globally, also focusing on corresponding radiation protection measures taken in practice;

- Make the data available as a tool for quality management and for trend analysis, decision making and resource allocation.
Arrangement for Cooperation between UNSCEAR and WHO (entry into force on 29 August 2012).

"UNSCEAR and WHO recognize the desirability of maximum co-operation in the statistical field and (…. ) avoiding duplication in the collection of statistical information whenever it is practicable……".

"The purpose …is to establish and coordinate the practical details of the periodic collection and exchange of relevant data on global and regional uses of ionizing radiation in medicine and on corresponding effects of radiation exposures on populations for the benefit of all Member States of the UN and WHO".

UNSCEAR Survey

Global Survey of Medical Radiation Usage and Exposures from 2005 onwards

The United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR), established by the United Nations General Assembly in 1955 to assess and report levels and effects of all sources of ionizing radiation conducts regular Global Surveys of Medical Radiation Usage and Exposure.

This platform is to support governments and international organizations to provide national and regional data on the use of radiation in medical diagnosis and treatment for the next UNSCEAR Global Survey of Medical Radiation Usage and Exposures from 2005 onwards.

National focal persons (NFP) are invited to register here to be able to access the protected area before they can download the questionnaires for official data submission. Additional national experts can be registered to support the NFPs. All contributions will be acknowledged by UNSCEAR in the relevant report to the General Assembly.

UNSCEAR is grateful to the World Health Organization for the arrangement for cooperation established which resulted in developing a common medical questionnaire for this survey and the European Commission for permitting the use of the outcomes of the DoseDataMed II project.

Please read further explanations and the background material under background and help.
## Data collection on medical exposures: a priority task of the WHO Global Initiative on RSHCS
